Calculus Theorems (1)

1 Completeness

1.3 Completeness

Theorem (Completeness of the Real Numbers). Every nonempty subset S of \mathbb{R} which is bounded above has a least upper bound $\sup S$.

Definition of **Supremum** ($\sup S$). A number.

2 Limits

2.12 Squeeze Theorem

Theorem (Squeeze Theorem). Let f, g, and h be defined for all $x \neq a$ over an open interval containing a. If

$$f(x) \le g(x) \le h(x)$$

for all $x \neq a$ in an open interval containing a and

$$\lim_{x \to a} f(x) = L = \lim_{x \to a} h(x)$$

where $L \in \mathbb{R}$, then $\lim_{x \to a} g(x) = L$.

3 Continuity

Definition of Continuity at a point. Function f is continuous at point a if $\lim_{x\to a} f(x) = f(a)$.

Definition. f has a **removable discontinuity** if $\lim_{x\to a} f(x) = L \in \mathbb{R}$ (in this case either f(a) is undefined, or f(a) is defined by $L \neq f(a)$).

Definition. f has a **jump discontinuity** if $\lim_{x\to a^-} f(x) = L_1 \in \mathbb{R}$ and $\lim_{x\to a^+} f(x) = L_2 \in \mathbb{R}$ but $L1 \neq L2$.

Definition. f has an **infinite discontinuity** at a if $\lim_{x\to a^-} f(x) = \pm \infty$ or $\lim_{x\to a^+} f(x) = \pm \infty$

Theorem (Intermediate Value Theorem). If f is continuous on [a,b], then for any real number L between f(a) and f(b) there exists at least one $c \in [a,b]$ such that f(c) = L. In other words, if f is continuous on [a,b], then the graph must cross the horizontal line y = L at least once between the vertical lines x = a and x = b.

4 Derivatives
